Corn is the ideal organism for introducing students to Mendelian genetics. Corn kernels express numerous phenotypes that are easy to recognize. The phenotypes typically used involve the color or shape of the kernel. Carolina maintains parental stocks of yellow and purple corn colors.

## Answers **Answer Key**

Corn is an excellent model to study Mendelian genetics as thousands of individual plants are not required. A single corn cob can have as many as 200 kernels. Each kernel represents a potential offspring. The colours of the corn kernels are inherited from the 'parent' plants.
