QuickStudy | Earth Science Laminated Study Guide

Stars are fueled by nuclear fusion in their cores. Most stars spend 90 percent of their lives as main sequence stars, converting H into He. Nuclear fission, on the other hand, is the breaking apart of heavy nuclei such as uranium. You can remember the word fusion because you know that to fuse two objects means to stick them together.

Earth, Moon and Sun Study Guide Part A: Define the following terms: satellite: an object that moves around another object in space; the moon is a satellite of the Earth orbit: the path that an object such as a planet makes as it revolves around a second object; the Earth has an elliptical (oval) orbit

Study Guide: Earth, Moon and Sun

As its life cycle progresses, a medium-sized yellow star like the sun expands into a red giant. Then, once the star has consumed all usable nuclear fuel, it collapses into a stellar body known as a white dwarf. This stage in the evolution of a star is associated with spectral class A in the Hertzsprung-Russell diagram.
