Endocrine System Overview Endocrinology is the study of endocrine cells/organs, the hormones secreted, regulation of hormone secretion and the effects of hormones on their target cells/organs. Endocrine vs. Exocrine tissues Endocrine secretes hormones, while exocrine secretes all the other stuff (mucus, enzymes, sweat).

Endocrine System Overview - Straight A Nursing

There are eight major glands that help in the functioning of the endocrine system. These are the pituitary gland, hypothalmus, thyroid, parathyroid, adrenals, pineal body and the reproductive glands (testes and ovaries). The pituitary gland is integral to the whole system.

Your one minute guide to the endocrine system | Nursing Times

I love seeing that "lightbulb" moment when students realize that they've been making the endocrine system a lot harder than it needs to be. Which is why I was so surprised when I realized that I've never, ever explained the best way to study Endocrine diseases on this blog. After all, Endocrine is only about the scariest, most intimidating, and seemingly complicated Med-Surg topic that ...
