People living in displacement may have specific, pre-existing mental health needs. Being displaced may mean disruption in treatment for any such pre-existing disorders, or new challenges to obtaining treatment while on the move or while in a host community.

Mental health and psychosocial support | Forced Migration ...

Forced migration is known to influence mental health. This empirical study conducted with migrated Kurdish women (N = 1,127) both in the European Union (EU) and in Turkey aimed to explore the relationships between posttraumatic stress reactions, forced migration, and mental health status. Posttraumatic reactions were discovered to be highly related to mental health state.

The impact of forced migration on mental health: A ...

Depression among forced migrants is closely linked with poor social support¹⁶; immigration processes, racial discrimination, homelessness, and destitution can all have an impact.¹⁷ A systematic review of the mental health implications of detaining asylum seekers confirms that child, adolescent, and adult immigration detainees experience high levels of anxiety, depression, post-traumatic stress, self harm, and suicidal ideation¹⁸ A review of UK data has shown high levels of self harm and ...

The health of forced migrants | The BMJ

extant literature has largely focused on the effects of pre-migration factors; however, increasingly, researchers recognize the critical impact of post-migration living difficulties (PMLD) in exacerbating refugee mental health. One example of a PMLD is stigma, defined as a socially devalued attribute (e.g., minority race, ethnicity, sex). A robust
