...

The first step in planning the deployment is to plan out the IP segmentation. Azure VMware Solution ingests a /22 network that you provide. Then carves it up into smaller segments and then uses those IP segments for vCenter, VMware HCX, NSX-T, and vMotion. Azure VMware Solution connects to your Microsoft Azure Virtual Network via an internal ExpressRoute circuit.

played an important role in planning an SAP deployment in Azure. It was on you to manage the number of persisted disks within a storage account. You needed to manage the storage accounts and eventually create new storage accounts to create more persisted disks. In recent years, the introduction of Azure managed disks relieved you from those tasks. The recommendation for SAP deployments is to leverage Azure managed disks instead of managing Azure storage accounts yourself.
