Missile Flight Simulation By Jeffrey

A missile flight simulation is a computational tool that calculates the flight of a missile from launch until it engages the target. The simulation is based on mathematical models of the missile, target and environment. This book provides instruction for the preparation of these mathematical models to simulate the flight of a surface-to-air missile.

I recently acquired a copy of "Missile Flight Simulation" by Dr. Jeffrey Strickland. I have worked in missile defense and tactical missile seeker system engineering for more than 20 years and I find this to be one of the more useful items in my missile flight dynamics library, after Zarchan's priceless "Tactical and Strategic Missile Guidance."

In this case the target is defined to be travelling at a constant speed of 328m/s, on a reciprocal course to the initial missile heading, and 500m above the initial missile position. From the simulation results it can be determined that acquisition occurred 0.69 seconds into the engagement, with closed loop guidance starting after 0.89 seconds.
