and allows simpler integration between different systems.

What are Web Services? Architecture, Types, Example

In fact, the term web service is defined by a W3C architecture document 9 this way: A Web service is a software system designed to support interoperable machine-to-machine interaction over a network. It has an interface described in a machine-process-able format (specifically WSDL).

Web Service Architecture - an overview | ScienceDirect Topics

The Web Services Model The Web Services architecture is based upon the interactions between three roles: service provider, service registry and service requestor. The interactions involve the publish, find and bind operations.

Web Services Architecture

Web Service Roles. There are three major roles within the web service architecture – Service Provider. This is the provider of the web service. The service provider implements the service and makes it available on the Internet. Service Requestor. This is any consumer of the web service. The requestor utilizes an existing web service by opening a network connection and sending an XML request. Service Registry
