On Dependability Issues in Ambient Intelligence Systems

Some researchers include security as one of the attributes of dependability. Security researchers consider confidentiality, integrity, and availability (and sometimes, non-repudiation) to represent the security status of the system and networks but it is lack of representing reliability and performance.

Dependability and Security Models

Reliability of safety-critical ambient intelligence applications is evaluated by Coronato et al. for continuous monitoring of systems-in-execution, against correctness properties [39,81]. The approach uses rapid prototyping to verify several system characteristics using structural and behavioral patterns for runtime verification targeting location of the mobile users within smart homes.
