As we advance in age, our bones reduce in size and become weaker. This change is especially true for post-menopausal women and it can result in osteoporosis. When this reduction of bone mass occurs, it predisposes us to dangerous falls which, in many cases, cause injuries. Healing from such injuries becomes impaired as we advance in age.

Size and breed also play a role. Smaller dogs tend to live longer than larger ones, but they may mature more quickly in the first few years of life. A huge pup might age more slowly at first, but be nearing middle age at 5. Tiny and toy breeds don't become "seniors" until around age 10. Medium-sized pooches are somewhere in the middle on both counts.

### **The Age of Aging | MediaVillage**

Aging is not, in and of itself, a disease. However, aging is the major risk factor for developing many major chronic diseases. Furthermore, many diseases appear to accelerate the aging process — which is manifested as declines in functionality and reduced quality of life.

### **Understanding of the Biology of Aging | National Institute ...**

Aging brings on increased stiffness of the chest wall, diminished blood flow through the lungs, and a reduction in the strength of your heartbeat. (In fact, maximum heart rate per minute declines with each year and can be estimated by subtracting your age from 220.) Don't worry too much about this, though.
